

VLADIMIR ĆIRKOVIĆ

Staff / Senior Backend Engineer · Payments, Billing & Fintech · Go, Java, Distributed Systems

+381 64 180 0810 · vladimir.cirkovic@gmail.com · linkedin.com/in/vcirkovic · github.com/vladimir · Belgrade, Serbia

SUMMARY

Staff-level backend engineer and tech lead with 19+ years building payment, billing, checkout, and other high-volume distributed systems across fintech, SaaS, crypto, and e-commerce. Hands-on expertise in Go and Java, with a track record of improving revenue capture, reliability, and transaction workflows.

TECHNICAL SKILLS

Languages	Go, Java, Scala, Kotlin
Backend & Data	Spring Boot, GraphQL, PostgreSQL, MySQL, MongoDB, Kafka, RabbitMQ, Stripe
Architecture	Distributed Systems, Microservices, Event-Driven Architecture, Event Sourcing, CQRS
Cloud & Delivery	AWS, GCP, Kubernetes, Docker, CI/CD

EXPERIENCE

Senior Software Engineer — Toggl Apr 2024 – Present · Remote

- Recovered previously lost revenue by implementing grace period invoicing that charges for usage accrued before payment failure
- Replaced Stripe-managed trial system with in-house solution, unlocking custom trial logic, flexible dates, and per-feature gating
- Replaced synchronous billing-to-accounts HTTP dependencies with event-driven workflows, allowing billing operations to continue during accounts-service degradation
- Hardened Stripe webhook pipeline: reduced processing latency, added retry logic, and eliminated dropped payment events

Go · PostgreSQL · Google Cloud · Stripe · Microservices · Event-Driven Architecture

Senior Software Engineer — BVNK Mar 2023 – Apr 2024 · Remote

- Built core crypto payment rails end-to-end: address generation → on-chain detection → settlement for payins, and wallet disbursement for payouts
- Shipped mass payout system for batch crypto payroll, processing hundreds of transactions per upload with idempotency guarantees
- Designed distributed wallet pooling to pre-generate wallets, cutting address creation latency and absorbing traffic spikes

Java · Spring Boot · Kafka · MySQL · Event Sourcing · AWS

Tech Lead — Vroom Feb 2021 – Mar 2023 · Remote

- Led Checkout team: owned the end-to-end purchase flow backend for a used car e-commerce platform
- Integrated vehicle data providers and financing partners, enabling seamless purchase transactions from listing to delivery
- Ran A/B experiments on checkout flow that directly improved conversion rate and revenue per transaction
- Drove hiring, architecture decisions, code reviews, and sprint planning across the team

Go · Kafka · PostgreSQL · Kubernetes · Docker · AWS

Senior Software Engineer — RMS (acquired by Moody's) Apr 2019 – Feb 2021 · Remote

- Built ExposureIQ from scratch: Java/GraphQL service aggregating multi-source data for portfolio managers analyzing millions of insured locations for catastrophe risk
- Designed TreatyIQ reinsurance platform in Kotlin with event sourcing and CQRS, providing full audit trails for regulatory compliance
- Developed Risk Modeler components in Scala using purely functional programming (Cats), improving correctness and testability

Java · Kotlin · Scala · Spring Boot · GraphQL · Event Sourcing · CQRS

Senior Software Engineer — Relax Gaming May 2016 – Apr 2019 · Remote

- Built game server for daily fantasy platform with Java microservices and async event processing; developed slot machine engines with certified RNG algorithms meeting international gaming compliance

Java · Spring · RabbitMQ · PostgreSQL · Microservices

Team Lead — Interactive Data (now ICE) Mar 2013 – May 2016 · Remote

- Led development of PrimeTerminal, a Java desktop app for private banking used by major financial institutions; directed S&P CapitalIQ's largest customization projects

Java · Swing · MongoDB · Spring · Financial Data

Software Engineer — Vast.com

Oct 2006 – Mar 2013 · Remote

- Built high-throughput data processing pipelines for big data workloads; developed text parsing and normalization engine using trie-based keyword matching

Java · Big Data · Parallel Processing · Text Mining

EDUCATION

Master of Science, Informatics and Software Engineering

University of Belgrade, Faculty of Organizational Sciences · Serbia
